

Shaira Leen Balahadia

RPA Developer

Philippines

(+63) 9190978271 | balahadiashai@gmail.com | Laguna, Philippines

Background

Shai has 8 years of IT experience across various sectors, including Utilities, Telecommunications, Finance HR Services and Insurance. She specializes in business analysis of automation processes for clients, as well as the development and design of automation solutions for RPA projects. Shai is also experienced in providing testing, support and hypercare to ensure the smooth functioning of RPA systems.

Professional Experience

- **Delivered end-to-end RPA and AWS automation solutions supporting key processes for a U.S. insurance organization.**
 - Led the full automation lifecycle, including client data gathering, creation of SDD/PDD documentation, development of automated workflows, execution of unit testing through UAT, deployment to production, and post-go-live hypercare support.
 - Successfully deployed 8 production automation processes and provided ongoing maintenance, enhancements, and operational support to ensure continuous process stability and optimization.
 - Authored and reviewed Test Plans for cross-team processes, ensuring adherence to automation best practices, coding standards, and quality benchmarks.
 - Configured AWS components and developed Lambda functions to integrate API-based automation, including orchestrating connections between AWS Lambda and UiPath Orchestrator to enable automated queue item creation and workflow triggering.
- **End to end development and providing support to live automation of UiPath processes for Finance and HR Management System based in Australia.**
 - Providing root cause analysis and suggestions for fixes to bugs found in automation.
 - Developed code for bug fixes and enhancements of the current bot design.
 - Supported 12 UiPath processes that check employee status, create payroll, and track leave management.
 - Responsible for initial investigation of issues, implementing workarounds, and creating incident tickets.
 - Experienced in deploying, managing, and monitoring attended and unattended robot via UiPath Orchestrator.
 - Skilled in configuring and managing queues in Orchestrator to handle large volume of transactions.
 - Experienced in using Orchestrator to monitor logs, track performance, and troubleshoot issues to ensure automation processes run smoothly.
 - Responsible for creating weekly status reports on the processes for the business.
- **Developed an RPA Solutions using UiPath tools for an internal client in the Philippines.**
 - Engaged in the creation of end-to-end process solutions, including data requirements gathering, creation of SDD and PDD documents, development, UAT, and presentation of process solutions.
 - Automated a process that inputs training records for internal employees, recording data for CE external credits requests.
- **Developed an RPA Solution for the Procurement Team based in Malaysia.**
 - Engage in the creation of process from end-to-end solutions such as data requirements gathering, creation of SDD and PDD documents, development, UAT, demo to client and process stabilization.
 - Automated process that extracts data using API and transform the data to input in a SMART website application.
 - Automated a process that post transactions using API functions in myProcure database for transaction monitoring.
- **Developed an RPA Solution for the HR Management System for a Utility Client based in US.**
 - Automated process that sends recurring reports daily, weekly, and monthly to business and sends out email notifications.

- Automated process that checks the daily health check of the API application, captures the results and masks sensitive and PII data, and sends out the email notification to the whole team.
- **Supporting live automation for Blue Prism processes created for a Telecommunication Provider Client based in UK.**
 - Automated a process that checks the status of a Post-Paid user and process the request based on the status of their accounts.
 - Providing root cause and suggestions of fixes to bugs found from automation.
 - Engage in testing and deployment of the processes/bot from UAT to Production.
